

ADJUSTING COLOUR CHANGE SPEED

Did you know this T8 function yet?

What?

Entering the trimming setup tab with [L2 > L5]. The percentage of the colour change speed can be adjusted using R6 and the function keys U1-U0.

Why?

In some cases, a slower colour change speed is handy to be able to intervene. For example, in the case of thick jackets, clamping can lead to raised flaps. The colour change may cause the catcher bar to fold down this flap. Without intervention, the flap would be stitched down.

Requirements

Fast Colour Change
