

SNAP IN BACK STITCHING

Did you know this T8 function yet?

What?

By default, the user holds down the backstitch button or pull rod until the desired position in the pattern is reached. When this function is enabled, the machine stitches backward until the button is pressed again.

On the start screen: Press L2 > R1 to enter the operating mode setup.

Press L5 to (de-)activate the function.

Why?

Users may find this type of operation more intuitive or are used to it from other machines.
