1. T8-/T8-2 New Functions

NOTICE

All discribed functions of the control unit T8-/T8-2 will be started at the Base Screen (BS).

The keys used in the function describtions are shown in the above T8-/T8-2-figure.

1.1 Adjust the number of slow start stitches after thread cutting

The number of slow stitches after thread cutting is now adjustable. For a secure start sequence after thread cutting the start stitches will be splitted. The function *Slow Start Stitches* determines how many start stitches will be stitched slow speed.

Key sequence: $GB \Rightarrow [L2] \Rightarrow [Shift] + [U0] \Rightarrow [L5]$

• Press [L2] Machine setup.

Machine setup
Speeds setup Operating modes setup
Tools setup
Sequin device
▶ Press [û] + [U0] <
Previous

- Press key combination [Shift] + [U0].
 - \Rightarrow The extended dialog *Machine setup* will fade in.

• Press **[L5]** *Trimming setup*.

Press [L2]/[R2] *Slow Start stitches* and type in the number of wanted slow start stitches with keys [U1] – [U0] in the input box.

• Press **[L8]** Confirm to adopt the changes.

1.2 Support of DataCollector and MY.ZSK

The Information Management System MY.ZSK captures and organizes operating data. The current operating data can always clearly be analyzed and utilized online.

An existing MY.ZSK System can now be connected to the machine.

Key sequence: $GB \Rightarrow [L3] \Rightarrow [R3]$

• Press [L3] Service.

• Press **[L8]** *Confirm* to adopt the changes.

1.3 Extended user administration

Additional to the normal management (User 1-4) user data can be taken over with RFID chips. More than 4 ssers can be registered with RFID Chips. The unknown new user will generally be registered as user 4 and existing data of user 4 will be overwritten.

Key sequence: $GB \Longrightarrow [U4] \Longrightarrow [L7]$

1.3.1 Activate user administration via RFID Chip

• Press [U4] MDA Stitch counter.

1.3.4 Register user with RFID Chip

• Press [U4] *MDA Stitch counter*.

	Read RFID chip	
_		-
DEL Del	lete character left of cursor	

- Scan the corresponding RFID Chip in the dialog *Read RFID chip*.
 - ⇒ If the RFID Chip is preassigned to an user, this user will be activated and the base screen fades in again. The RFID identifier and the name are shown in the title bar.
 - ⇒ If the RFID Chip is unknown, he will be listed and activated under User 4. For checking purposes the dialog *MDE Stitch counter* stays indicated. The dialog can be fade out with keys [R8], [OK] or [ESC]. The RFID identifier will be shown in the title bar of the base screen.

NOTICE

If the Simple User Interface is activated, the functions to register and delete an user as well as to clear the counters are not available.

1.4 Deactivating Silk stitch functionality

The Silk stitch functionality can now be generally switched off.

When the function *Silk stitch off* is deactivated a variable pantograph start is used. According to the embroidery speed and stitch length a new pantograph start will be assigned.

With activated function *Silk stitch off* a constant pantograph start is used.

NOTICE

To change the function Silk stitch off the currunt design has to be closed, respectively no design may be loaded into the machine.

Key sequence: $GB \implies [L2] \implies [Shift] + [U0] \implies [L6] \implies [R7]$

• Press [L2] Machine setup.

- Press key combination [Shift] + [U0].
 - \Rightarrow The extended dialog *Machine setup* will fade in.

1.5 Guideline functionality at Editor

The guideline functionality of the editor helps to position designs and applications.

Following options are available:

- Symmetric cross
- Asymmetric cross
- Rectangle
- Cap mode

After execution of the respective function a new design will be stored in the memory.

Key sequence: $GB \Rightarrow [L5] \Rightarrow [ESC]$

• Press **[L5]** *Editor*.

1.6 Additional changes

1.6.1 Software changes

Embroidery speed settings

When changing the embroidery application the adjustment of embroidery speed will be kept and no longer reset to the maximum speed.

Length of file identification

It is now possible to load external design codes with long file names (**not de-sign names**) from USB-Stick or network. The maximum file name length is up to 150 characters.

1.6.2 machine processes changes

Application key

Contrary to its former mode of operation and for safety reasons the application key now starts its function after an activity length of 1 second.
