1. General

1.1 Glossary

NOTICE

All described functions of the control unit T8-/T8-2 will be started at the Base Screen.

Keynames

The used key notations of function describtions will be shown in the T8-/T8-2-figure above.

Keys for controlling operation of the software are usually depicted as follows:

• [R1] Select machine design

Recurring key functions

The following recurring key functions always have the same position and function in the screen shots. These functions will be explained here for simplifications and they will be displayed in function description only as key functions.

[L7] Defaults

When using this function, the settings shown in the screen will be reset to default.

[L8] Confirm

With this function you confirm the accuracy of your selection, settings and entries. The control unit applies your values and generally leads to the previous menu.

[R8] Previous

Herewith you can cancel the current operation at any time. Changes which have been made will not be applied and the previous menu will be shown again.

Used input examples

The user names, paths etc. displayed in the figures, are exemplary only and they have to be adjusted to your own personal needs at the respective locations.

Listings

Displayed Listings in the screen images will be created automatically and therefore they may vary from listings displayed on your T8-/T8-2-control unit.

2. T8-/T8-2 Network

2.1 Load design from remote client

When using a MY.ZSK system in conjunction with a MY.ZSK router, a ZSK embroidery machine with T8-/T8-2-control unit in a local network, a connection to another network can be established with a shared folder via a parallel connection. In this process the MY.ZSK router acts as a bypass allowing the requested connection through.

This way from this remote client which is not connected to the local network for example an embroidery pattern can be loaded directly or via a barcode reader in the machine .

Requirements:

- Local network with router and connection to the Internet.
- Networked ZSK embroidery machine with T8-/T8-2 control unit.
- MY.ZSK system with MY.ZSK router in the local network.
- Access to a remote domain or a remote client.

Figure: 1.2: Functional layout

2.2 IP Adress of T8-/T8-2 control in local network

In a network, the IP addresses of the connected individual devices are usually generated and managed automatically by a DHCP server in the router of the network. In some cases it is required to assign a static IP address to the connected devices. This then needs to be set manually in the control software of the device. In the router, this address is then applied to the connected device and reserved.

2.2.1 Assign IP address automatically (DHCP)

(Recommended for experts only)	·	

- Press [L2] Issue manually... to activate the function.
- [R3] IP adress

	Enter network IP adress		
	For small local networks use IP adress from adress range as follows:		
	192.168.0.x x = 1254		
	For further inquiry contact your local network administrator.		
	IP address:		
	192 . 168 . 178 . 2		
Con	firm Yrevious		
1			

• Enter the static IP address for the control unit.

[TAB] = Change to the next input field.

• [L8] Confirm

Figure: 1.9: Dialogue: Enter Network IP address

2.3 Establish path to the remote domain or client

The T8-/T8-2 control unit can be connected to a remote domain, or a remotely located client over the Internet. In this way, the access to any embroidery pattern pool is possible. In order to establish the connection please follow the instructions here:

2.3.1 Client authentification / Login

When accessing remote clients, servers or domains, a registration (authentication) is required in the network to be accessed. In order to obtain the login data (username / password) for these networks, please contact the responsible network administrator. Enter the login information in your control panel :

• [L7] Software-/hardware settings

2.4 Establish network connection

NOTICE

In order to establish the connection to the remote network / client, registration is required. Therefore please login before establishing the connection (see: Client authentication / Login).

- [R1] Select machine design
- [U5] Select design from network

In case there is still an active design in the machine, the following message will be displayed:

Machine design	
STOP	
Selecting a new design terminates current embroidering operation	
Select design Previous	

• [L8] Select design

- \Rightarrow The active design will be closed.
- ⇒ The dialog *Check pantograph configuration* will be displayed.

>> * Border frame	No.: 001	Vers.: 00
* Tubular frame	No.: 002	Vers.: 00
* ZSK 99 cap attachment		Vers.: 00
* Border frame with single frames		Vers.: 00
* Cylinder frame		Vers.: 00
* Hemdtaschen Rahmen	No.: 007	Vers.: 00
Confirm		

- Select an appropriate pantograph setting from the list.
- [L8/R8] Confirm

Figure: 1.15: Signal: Machine design

Figure: 1.16: Dialogue: Check pantograph configuration

⇒ The dialog *Network connections* will be displayed. This contains a list of existing network connections.

• [L8] Set up new connection

⇒ The dialog *Enter net connection name as follows* will be displayed .

Figure: 1.19: Dialogue: Enter net connection name as follows

	Enter net connection name as follows:	
a		z
b		Y
c	Server or \\Server\SharedDirectory	×
d		w
e	\Win7-ub\bde	v
f		u
a	TAB Switching to other characters	t
h	Delete character left of cursor	s
i j	k 1 m n o p q	r

• Enter here the required path or the address to the remote network / client / shared folder.

Example: Win7 ub

Win7-ub = Computer- respectively Server name bde = Shared folder

- Confirm with **[OK]**, the path or address entry.
 - \Rightarrow The connection is checked and the settings are applied.

Delete entry

• **[L8] Delete entry** to confirm the deletion of the connection.

3. MY.ZSK-Management System

3.1 MY.ZSK Setup

The Informations Management System MY.ZSK captured and organized operating datas. The operating datas will always current and clearly arranged, online analyzed and utilized.

An available MY.ZSK System can now connected to the machine.

3.1.1 Connect machine to MY.ZSK-Database
